Exposure Estimation for Power

A total of three (3) substations are located in high flood- susceptibility area, Calinan Substation, Tugbok Substation, Matina Substation. Among the three (3) substations, Calinan Substation has the highest value with ₱140 million. It is followed by Tugbok Substation with ₱130 million. While Matina Substation has the third highest value with the replacement cost/value of ₱120 Million.

Table LU– 37. Lifeline Utilities, Power Substations, Exposure Estimation for Flood, Davao City

EXPOSURE				SENSITIVITY/VULNERABILITY			ADAPTIVE CAPACITY	
NAME OF POWER PLANT	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES
Calinan Substation	1,000.00	140 Million	140 Million	a) Perimeter Fence : Concrete High Wall Fence (5.5m HT) b) Control Building: Concrete Wall and Floor ; with Roofdeck c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	a) Industrial All Risk Insurance b) Comprehensive general Liability	NONE
Tugbok Substation	1,809.00	130 Million	130 Million	a) Perimeter Fence : Concrete High Wall Fence (2.5m HT); and 2" cyclone wire Fence along roadside b) Control Building: Pre-painted Metal Sheet Cladding Wall and Concrete Floor ; Pre-painted Roofing Sheet. c) Equipment Support : All Steel Structures	a) Operational b) Upgraded Within past 5 years	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance	a) Industrial All Risk Insurance b) Comprehensive general Liability	NONE
Matina Substation	1,000.00	120 Million	120 Million	a) Perimeter Fence : Concrete Fence (3.0m HT) b) Control Building: Concrete Wall and Floor ; PU Panel Roof c) Equipment Support : All Steel Structures	a) Operational b) Upgraded Within past 5 years	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	a) Industrial All Risk Insurance b) Comprehensive general Liability	NONE
Pampanga Substation	1,031.00	118 Million	118 Million	a) Perimeter Fence : Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: G.I. Sheet walls, not insulated. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last upgraded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	a) Industrial All Risk Insurance b) Comprehensive general Liability	NONE

Exposure Estimation for Level I Water System

The value of exposed lifeline remains the same per spring and well sources. The estimated value of the exposed lifeline for spring is ₱41,586.32, as to wells, the estimated value is ₱5,000,000. Eight spring sources in Tibungco, Panacan, Lizada and Binugao all have the same estimated value of ₱41,586.32.

Exposure Estimation for Level III Water Supply

Three barangays with mainline pipes with huge expense in case it would be hit by flood are Mintal, Biao Guianga and Tugbok. In Mintal the total value of exposed 500 mm mainline is P18, 118,752.26. In Biao Guianga the total value of exposed 300 mm main line pipe is 19,818,591.58. Tugbok has the highest value of exposed lifeline at P26, 119,095.17 Databased to the presence of the 786.72 meters of 500 mm diameter pipe in the area.

Exposure Estimation for DCWD Production Wells

Six wells are highly susceptible to flood which individually cost ₱6,500,000.00. Majority of these wells have vertical turbine pump with good condition and an existing hazard resistant design.

Exposure Estimation for Roads

Out of all the road segments, Calinan-Baguio-Cadalian Road has the highest value worth Php 583,079 attributed to the Php 35,000,000 replacement cost and the exposed length of 16.65 kilometers. Other roads which have segments identified with high value of replacement cost is the Carlos P. Garcia Highway, Davao Bukidnon Road, Eden-Tagurano Road, Fatima-Malabog Road, Mabuhay-Pañalum Paquibato Road and Toril Bayabas-Eden Road.

Table LU– 44. Lifeline Utilities, Roads, Exposure Estimation Table for Landslide, Davao City

EXPOSURE				SENSITIVITY		
Road Name	Exposed length (Linear Kilometers)	Replacement Cost per Linear Kilometer	Value of Exposed Lifeline	Surface Type	Existing Condition	Hazard Resistant Design
2nd Avenue	0.2056	60,000,000	12,337,800	concrete	good	Yes

Exposure Estimation for Bridges

Agdao Flyover has the highest value with a total cost of Php 754, 57,000 for an exposed length of 382.98 meters. The second highest is the Buhangin Flyover with a total value of Php 585,684,000 for an exposed length of 488.07 meters. Bolton Bridge 2 is the third highest with the value of Php 236,256,000 for an exposed length of 196.80 meters.

Agdao Flyover has the highest value with a total cost of Php 754, 57,000 for an exposed length of 382.98 meters. The second highest is the Buhangin Flyover with a total value of Php 585,684,000 for an exposed length of 488.07 meters. Bolton Bridge 2 is the third highest with the value of Php 236,256,000 for an exposed length of 196.80 meters.

Table LU-45. Lifeline Utilities, Bridges, Exposure Estimation Table for Landslide, Davao City

Name	EXPOSURE			SENSITIVITY			ADAPTIVE CAPACITY	
	Exposed Length (Linear Meters)	Replacement Cost per Linear meter	Value of Exposed Lifeline	Surface Type	Existing Condition	Hazard Resistant Design	Insurance Coverage	Available Government Resources
Agdao Flyover	382.98	1,200,000	459,576,000	Concrete	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes.
Angalan Br. I	12.10	1,200,000	14,520,000	Concrete	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes.
Angalan Br. II	11.92	1,200,000	14,304,000	-	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes.

Exposure Estimation for Bridges

Agdao Flyover has the highest value among the bridges exposed to the high liquefaction susceptibility at ₱459,576,000 followed by Bunawan Bridge 1 with ₱59,712,000, Bunawan Bridge 2 with ₱57,348,000, Matina Bridge ₱46,392,000, and Bago Bridge with ₱37,452,000.

Agdao Flyover has the highest value among the bridges exposed to the high liquefaction susceptibility at ₱459,576,000 followed by Bunawan Bridge 1 with ₱59,712,000, Bunawan Bridge 2 with ₱57,348,000, Matina Bridge ₱46,392,000, and Bago Bridge with ₱37,452,000.

Table LU-53. Lifeline Utilities, Bridges, Exposure Estimation Table for Liquefaction, Davao City

EXPOSURE				SENSITIVITY			ADAPTIVE CAPACITY	
ROAD NAME	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES
Agdao Flyover	382.98	1,200,000	459,576,000	Concrete	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefiting its local constituents but local capacities may not be able to pay the additional taxes.
Angalan Br. I	12.10	1,200,000	14,520,000	Concrete	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefiting its local constituents but local capacities may not be able to pay the additional taxes.

Exposure Estimation for Level II Water Supply System

For Level 2, Barangays Sirawan and Waan have two wells highly susceptible to liquefaction. These wells costs up to ₱46,200 each.

Table LU-56. Lifeline Utilities, Level II Water System, Exposure Estimation Table for Liquefaction, Davao City

ADMINISTRATIVE DIVISION	BARANGAY	EXPOSURE				SENSITIVITY		ADAPTIVE CAPACITY	
		SUSCEPTIBILITY	TYPE	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN	INSURANCE COVERAGE	AVAILABILITY OF GOVERNMENT RESOURCES
Toril	BINUGAO	Moderate	2HP	46,200	46,200	FAIR	Yes: casing of the well	None, but there is 1 month warranty if the waterpump is installed by the supplier	Yes. Subject to fund proposal

Exposure Estimation for Level III Water Supply System

Bago Aplaya is the area with the longest pipeline highly susceptible to liquefaction, at 1,084 meters in length. The total replacement cost for such pipeline is ₱43, 472,139.91. Meanwhile, Tigatto has second most expensive exposed waterline with a total value of ₱20, 967,744.19. Each well has a replacement cost/value of exposed lifeline of ₱6, 500,000.

Exposure Estimation for DCWD Wells

For Level III, DCWD Wells, a total of six (6) wells are highly susceptible to liquefaction. These wells are found in Lower Rapnaga, Puan, Barangay Bago Aplaya, Crossing Bago Aplaya, Barangay Bago Aplaya, Km 10, Bago Aplaya, fronting Ideal Subdivision, Barangay Bago Aplaya, Davao-Cotabao Road, near Bago Bridge, Barangay Bago Aplaya, and Km 11, Dumoy, near the entrance of the Distal, Barangay Dumoy

Table LU-57. Lifeline Utilities Level III DCWD Production Wells Exposure Estimation Table for Liquefaction, Davao City

EXPOSURE				SENSITIVITY		
LOCATION	Liquefaction	PUMP TYPE	REPLACEMENT COST	VALUE OF EXISTING LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN
UUHSA, Brgy. Talomo	Moderate	VERTICAL TURBINE	6,500,000.00	6,500,000.00	GOOD	YES

Exposure Estimation for National Roads

Davao-Agusan Highway has the highest value at ₱129, 245,120 out of the total exposed length of 2.4865 kilometers. Mc-Arthur Highway is also the second highest with a total value of ₱117,232, 391 out of the exposed value of 2.0934 kilometers. Values previously mentioned are only for the length susceptible to 5-meter wave.

Exposure Estimation for National Bridges

Among the four (4) bridges which are exposed to 3-meter wave, the highest value is the Talomo Bridge 2, with a total value of exposed lifeline of ₱98,764,380. Ilang Bridge with a total value of ₱30,840,000.

Table LU-60. Lifeline Utilities, Bridges, Exposure Estimation Table for Storm Surge with 3-meter wave, Davao City

EXPOSURE				SENSITIVITY			ADAPTIVE CAPACITY	
ROAD NAME	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES
Bago Br.	31.21	1,200,000	37,452,000	---	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes
Ilang Br.	25.70	1,200,000	30,840,000	—	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes
Talomo Br. 1	48.10	2,053,000	98,749,300	—	Good	Yes	All existing bridges do not have damage insurance coverage. Exposure Estimation for Power Substations

The Don Ramon Substation, which is exposed to all levels of wave, has the highest amount value at ₱70 million. Bajada Substation and ERA Substation both have the value of ₱200 million, while Dumoy Substation has a value of ₱118 million.

Table LU-61. Lifeline Utilities, Power Substations, Exposure Estimation Table for Storm Surge with 2-meter wave, Davao City

EXPOSURE				SENSITIVITY/VULNERABILITY			ADAPTIVE CAPACITY	
NAME OF POWER PLANT	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES
Sta Ana Substation	607.00	135 Million	135 Million	a) Perimeter Fence : Concrete High Wall Fence (5.5m HT) & Bended Metal Sheets b) Control Building: Concrete Wall and Floor ; with Roofdeck c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	a) Industrial All Risk Insurance b) Comprehensive General Liability	NONE
R.Castillo Substation	852.00	125 Million	125 Million	a) Perimeter Fence : Concrete High Wall Fence (3.5m HT) b) Control Building: Concrete Wall and Floor ; PU Panel Roof c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	a) Industrial All Risk Insurance b) Comprehensive General Liability	NONE
Pampanga Substation	1031.00	118 Million	118 Million	a) Perimeter Fence : Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: G.I. Sheet walls, not insulated. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last up-graded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	a) Industrial All Risk Insurance b) Comprehensive General Liability	NONE
Don Ramon Substation	15540.00	570 Million	570 Million	a) Perimeter Fence : Concrete High Wall Fence with Steel Grating (3.0m HT) b) Control Building: Concrete Wall and Floor ; G.I. Roof Panels c) Equipment Support : All Steel Structures	a) Operational b) Upgraded 5 years ago.	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance	a) Industrial All Risk Insurance b) Comprehensive General Liability	NONE

Exposure Estimation for Level III Water Supply

For Level 3 lifeline utilities, a total of 101 waterlines are exposed to storm surge with 5-meter wave. Out of all these individual mainline pipes the most costly is the waterline in Dumoy with a total length of 461.42 meters. It has a value of ₱18,503,022.39. This is followed by a main line pipe located in Bago Aplaya with an exposed length of 347.68 meters with a total value of ₱13,942,069.72. Another line in Talomo with total length of 275.23 meters also has high value of ₱12,165,276.16.

Exposure Estimation of Roads for Active Fault

A combination of three portions of McArthur Highway has the highest cost equivalent of ₱22, 308,007. Meanwhile, a portion of Fatima-Malabog-Road and Davao -Bukidnon Road also have high value at ₱1, 733,275, and ₱1,057,104, respectively.

Table LU-70. Lifeline Utilities Exposure Estimation of Roads for Active Fault, Davao City

EXPOSURE				SENSITIVITY		
ROAD NAME	TOTAL LENGTH (KILOMETERS)	REPLACEMENT COST PER LINEAR KILOMETER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT
Calinan-Baguio-Cadalian Road	0.0106	35,000,000	372,526	concrete	good	Yes
Calinan-Baguio-Cadalian Road	0.0108	35,000,000	378,525	concrete	good	Yes

Exposure Estimation of Bridges for Active Fault

Lipadas Bridge 1 and 2 are exposed to Dacudao Fault with the values of ₱45,360,000 and ₱48,000,000, respectively.

Table LU-71. Lifeline Utilities, Bridges, Exposure Estimation Table for Faultline, Davao City

EXPOSURE				SENSITIVITY			ADAPTIVE CAPACITY	
ROAD NAME	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES
Lipadas Br. I	37.80	1,200,000.00	45,360,000	Concrete	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes
Lipadas Br. II	40.00	1,200,000.00	48,000,000	Concrete	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes

Exposure Estimation for Level II Water System for Faultline

The 3 HP well in barangay Manambulan, costs, ₱60, 500.

Table LU-72 Lifeline Utilities, Level II Water System, Exposure Estimation Table for Faultline, Davao City

EXPOSURE					SENSITIVITY		ADAPTIVE CAPACITY	
BARANGAY	SUSCEPTIBILITY	TYPE	REPLACE- MENT COST	VALUE OF EXPOSED LIFELINE	EXISTING CONDITION	HAZARD RE- SISTANT DESIGN	INSURANCE COVERAGE	AVAILABILITY OF GOVERNMENT RESOURCES
MANAMBULAN	Tamugan Fault	3 HP	60,500	60,500	FAIR	Yes: casing of the well	None, but there is 1 month warranty if the waterpump is installed by the supplier	Yes. Subject to proposal

Exposure Estimation for Level III Water System for Faultline

One mainline in Mudiang with a total length of 650.63 meters has the highest value of exposed lifeline at ₱12,426, 970.17, this is followed by a separate mainline in Tugbok which cost is ₱303,228.60, and Dumoy mainline costing up to ₱232,702.37.

Table LU-73. Lifeline Utilities Level III Water System Exposure Estimation Table for Faultline, Davao City

Degree of Impact for Roads

Agdao Flyover, portions of Carlos P. Garcia Highway, portions of Davao Bukidnon Road, Don Julian Rodriguez Avenue, Eden-Tagurano Road, Inawayan-Baracatan Road, J.P Cabaguio Road, Leon Garcia St., Libby Road, Ma-a Radio St, Manggahan St, McArthur Highway, Pichon, Quimpo Boulevard, Quirino Avenue, and Rafael Castillo St. have high degree of impact. Direct impacts in terms of number of fatalities, injuries and value of the property damage will be disastrous given the extent of exposure and the current sensitivity of the system. The degree of impact was assessed using the data on the value of the exposed lifeline and also the volume of vehicles that will traverse on the said road network.

Degree of Impact for Bridges

For the degree of impact, high rating pertains to that the estimated direct impacts in terms of number of fatalities, injuries and value of the property damage which will be disastrous given the extent of exposure and the current sensitivity of the system. Angalan Bridge 1, Angalan Bridge V, Angalan Bridge VI, Bago Bridge, Bato Bridge, Bolton Bridge 1, Bolton Bridge 2, Bunawan Bridge 1, Bunawan Bridge 2, Davao River Bridge, Generoso Bridge 1 and 2, Matina Bridge, Pagan Grande, Pagan Pequeno, Panacan Bridge, Pangi Bridge, Pangi Bridge, Sasa Bridge, Suawan Bridge, Tagurano Bridge, Talomo Bridge 1, Talomo Bridge 2, and Tamugan Bridge have high degree of impact during flood occurrence. This is important to be monitored because these bridges connect rivers of the city which are susceptible to flooding

Table LU-74. Lifeline Utilities, Bridges, Degree of Impact Table for Flood, Davao City

ROAD NAME	EXPOSURE			SENSITIVITY			IMPACT

Degree of Impact for Power Substations

A total of three power substations namely Calinan, Tugbok, and Matina Substation have moderate degree of impact. Moderate degree of impact means medium to low cost needed to return to pre-impact levels.

Table LU-75. Lifeline Utilities, Power Substations, Degree of Impact Rating for Flood, Davao City

EXPOSURE				SENSITIVITY/VULNERABILITY			DEGREE OF IMPACT		
NAME OF POWER PLANT	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN	GROUP 1	GROUP 2	AVERAGE
Calinan Substation	1,000.00	140 Million	140 Million	a) Perimeter Fence : Concrete High Wall Fence (5.5m HT) b) Control Building: Concrete Wall and Floor ; with Roofdeck c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	1	3	2
Tugbok Substation	1,809.00	130 Million	130 Million	a) Perimeter Fence : Concrete High Wall Fence (2.5m HT); and 2" cyclone wire Fence along roadside b) Control Building: Prepainted Metal Sheet Cladding Wall and Concrete Floor ; Prepainted Roofing Sheet. c) Equipment Support : All Steel Structures	a) Operational b) Upgraded Within past 5 years	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance	1	3	2
Matina Substation	1,000.00	120 Million	120 Million	a) Perimeter Fence : Concrete Fence (3.0m HT) b) Control Building: Concrete Wall and Floor ; PU Panel Roof c) Equipment Support : All Steel Structures	a) Operational b) Upgraded Within past 5 years	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	1	3	2
Pampanga Substation	1,031.00	118 Million	118 Million	a) Perimeter Fence : Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: G.I. Sheet walls, not insulated. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last upgraded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	1	2	1.5

Lifeline Utilities Level I Degree of Impact

As presented, four (4) barangays namely, Tibungco, Panacan, Lizada and Binugao have high degree of impact. A total of three (3) spring sources in Tibungco, two (2) spring sources in Panacan, four (4) spring sources in Lizada and two (2) spring sources in Binugao have high degree of impact. All spring sources have the same cost.

Degree of Impact on Level II Water System

Based on the assessment, Level 2 sources obtain only moderate degree of impact as the highest rating. Moderate direct impact in terms of value of property damage are expected on these water sources upon flood occurrence. Short to medium term indirect impacts will also be experienced which may affect development processes.

One spring source in Binugao, one spring source and two wells in Sirawan, three spring sources in Mt. Apo National Park, two spring sources in Tungkalan, one spring source in Daliaon Plantation, two wells in Subasta, two wells in Waan, One well each in Tigatto, Subasta and Baguio, and one spring source each in Cawayan, Malagos, Salaysay.

Degree of Impact on Level III Water System

Same as the Level I Degree of Impact the highest rating to flooding in Level II Water System is moderate. Mainline pipes in Bago Aplaya, Matina Aplaya, Ilang and Tibungco are identified to have moderate degree of impact this is in lieu of the presence of these lines within the bridges.

Degree of Impact on DCWD Production Wells

Submersible wells have moderate degree of impact rating while vertical wells have high degree of impact. This is because submersible wells are less exposed to flood waters. Identified to have high degree of impact are 14 production wells found in Kilometer, Talomo Sump Bangkal, Brgy. Talomo, UUHSA, Brgy. Talomo, Km. 8 Ulas, Brgy. Talomo, Davao-Cotabato Road, near Bago Bridge, Brgy. Bago Aplaya, Gallera de Oro Subdivision near Block 8, Brgy. Bago Aplaya, Purok 6, Sta Cruz Bago Gallera Road fronting Spring Valley, Brgy. Bago Gallera, Reldo Village, Acacia St., Brgy. Bago Gallera, Along Apo Golf Road, Brgy. Bago Aplaya, Along Libby Road in front of San Lorenzo Village, Brgy. Bago Gallera, Farland Extension near Block 2, Brgy. Dumoy, Mangahan Bridge Alambre, Toril, Tugbok Quarry, Along Davao Bukidnon Road, Brgy. Tugbok, Los Amigos.

Degree of Impact on Cell Sites

Cell sites found in Peralta Property, Seminary Road Catalunan Grande, and Catalunan Grande, Talomo District, #88 Maya St. Barangay 76-A, Ecoland Barangay Bucana and National Highway, Times Beach, Matina Aplaya have high degree of impact. High degree of impact means that there is an estimated value of damage which will be disastrous, given the extent of exposure and the current sensitivity. Medium to long term impacts shall also be experienced, which may affect development processes. Significant cost is needed to return to pre-impact levels.

Table LU-80. Lifeline Utilities, Cell Sites, Degree of Impact Table for Flood, Davao City

Degree of Impact for Landslide

Degree of Impact for Roads

A total of 0.8466 kilometers of Calinan-Baguio Cadalian Road, Carlos P. Garcia Highway, Davao-Bukidnon Road, portion of Eden-Tagurano Road, Fatima-Malabog Road, Inawayan-Baracatan Road, Mabuhay-Pañalum-Paquibato Road and a portion of Toril-Bayabas-Eden-Road are assessed to have high degree of impact upon landslide occurrence.

Degree of Impact for Landslide

Tagurano Bridge, is a bailey bridge with the highest degree of impact and has a value of Php 14, 952,000.

Table LU-82. Lifeline Utilities, Bridges, Degree of Impact Table for Landslide, Davao City

EXPOSURE				SENSITIVITY			IMPACT			
Road Name	Exposed Length (Linear Meters)	Replacement Cost per Linear meter	Value of Exposed Lifeline	Surface Type	Existing Condition	Hazard Resistant Design	Degree of Impact			Average
							Group 1	Group 2	Group 3

Tagurano Br.	12.46	1,200,000	14,952,000	Bailey	Good	Yes	3	3	3	3.00

Degree of Impact for Power Substations

The Tibungco Substation is the only substation identified to be susceptible to landslide and it has low degree of impact.

Table LU-83. Lifeline Utilities, Power Substations, Degree of Impact Table for Landslide, Davao City

EXPOSURE				SENSITIVITY/VULNERABILITY			DEGREE OF IMPACT		
Name of Power Plant	Area Occupied (sq.m)	Replacement Cost	Value of exposed Lifeline	Construction Materials Used	Existing Condition	Hazard Resistant Design	Group 1	Group 2	Average
Tibungco Substation	2,626.00	118 Million	118 Million	a) Perimeter Fence :CHB Fence with top Guard Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: P.U. Panel walls and roof. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last upgraded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	1	2	1.5

Degree of Impact for Level I Water System

Seven (7) spring sources found in Bunawan, Cabantian, Daliao and Ilang have high degree of impact to an occurrence of landslide. This is primarily because these spring sources are located in mountain slopes and may technically be washed out or be destroyed upon an occurrence of landslide.

Table LU-84. Lifeline Utilities, Level I Water Supply, Degree of Impact Table for Landslide, Davao City

EXPOSURE				SENSITIVITY		IMPACT

Degree of Impact for Level II Water System

A total of 101 spring and well sources are assessed to have high degree of impact upon an occurrence of landslide. These are located in Binugao, Acacia, Bantol, Callawa, Camansi, Carmen, Dalag Lumot, Daliaon Plantation, Gatungan, Gumalang, Gumitan, Lampianao, Lumiad, Magsaysay, Magtuod, Malabog, Malamba,

Degree of Impact for Level III Water System

A total of 34 mainline pipes with a total length of 9,156.21 meters have moderate degree of impact. These total length include pipes in Catalunan Grande, Langub, Ma-a, Magtuod, Matina Crossing, Matina Pangi, Panacan, Talomo, Tibungco, and Tigatto.

Degree of Impact for the Cell Sites

A total of ten (10) cell sites have high degree of impact with 2.5 score. These are found in Shrine Hills Matina, Barangay Panorama, Water Tank, Palos Verdes Golf Course & Subdivision, Mandug, Eden Nature Park, Brgy. Eden, Toril District, Brgy. Sirib, Calinan District, Brgy. Mandug, Carnoustie St., Palos Verdes Compound

Degree of Impact for Roads

A total for 20 road networks have high degree of impact. These are Agdao Flyover, Bonifacio Rotonda, C.P. Garcia Highway, Claro M. Recto, Dacudao Avenue, Davao-Agusan Highway, Davao Bukidnon Road, Don Julian Rodriguez, Florentino Torrest St., J.P Cabaguio Avenue, Jose P. Laurel Avenue, Leon Garcia Avenue, McArthur Highway, Pichon, Quezon Boulevard, Quimpo Boulevard, Quirino, Rafael Castillo, Ramon Magsaysay, Sta. Ana Avenue. The area with the highest exposed length is the Davao Agusan Highway with 14.4817 kilometers exposed with the corresponding value of ₱115,853,350. This is followed by McArthur

Degree of Impact for Bridge

For bridges, Agdao Flyover, Bunawan Br., Bunawan Bridge 2, Matina Bridge, Bago Bridge, Panacan Bridge and Sasa Bridge have high degree of impact. Among the seven, Agdao Flyover has the highest exposed length with 382.98 and the highest value of ₱459,576,000.

Table LU-90. Lifeline Utilities, Bridges, Degree of Impact Table for Liquefaction, Davao City

ROAD NAME	EXPOSURE			SENSITIVITY			IMPACT			
	EXPOSED LENGTH (LINEAR)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	DEGREE OF IMPACT			AVERAGE
							GROUP 1	GROUP 2	GROUP 3	
Agdao Flyover	382.98	1,200,000	459,576,000	Concrete	Good	Yes	3	3	3	3.00

Degree of Impact for Level I Water Supply

All deep wells exposed to high liquefaction susceptibility have the high degree of impact rating. These wells are found in Talomo River, Wangan, Talandang, Ula and Riverside.

Degree of Impact for Level II Water Supply

For level 2, sources which have moderate degree of impact are found in Binugao , Sirawan and Waan.

Table LU-93. Lifeline Utilities, Level II Water System, Degree of Impact Table For Liquefaction, Davao City

EXPOSURE				SENSITIVITY		DEGREE OF IMPACT
BARANGAY	TYPE	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN	
BINUGAO	2HP	46,200	46,200	FAIR	Yes because of the design of the casing of the well.	2
SIRAWAN	2HP	46200	46200	FAIR	Yes because of the design of the casing of the well	2
SIRAWAN	2HP	46200	46200	FAIR	Yes because of the design of the casing of the well	2
SIRAWAN	2HP	46200	46200	FAIR	Yes because of the design of the casing of the well	2
WAAN	18GS20	46200	46200	FAIR	Yes because of the design of the casing of the well	2
WAAN	2HP	46200	46200	FAIR	Yes because of the design of the casing of the well	2

Degree of Impact for Level III Water Supply

A total of 433 lines with a total length of 54,289.28 meters have a moderate degree of impact. Matina Crossing has the longest exposed mainline with a total length of 7,607.89 meters with the value of ₱150,979,88. This is followed by Bago Aplaya with 28 lines totalling up to 5288.49 with a total value of

Degree of Impact for Storm Surge

The roads which have high degree of impact are C.P Garcia Highway, Dacudao Avenue, Davao-Agusan Highway, Florentino Torres St., J.P. Cabaguio, J.P Laurel, Libby Road, McArthur Highway, Old Airport, Pichon St., Quimpo Boulevard, Quimpo Avenue, and McArthur Highway. High degree of impact means estimated direct impacts in terms of value of the property damaged, extent of exposure, and current sensitivity of the system. Other roads which are not mentioned all have moderate degrees of impact.

Degree of Impact for Bridges

The Ilang Bridge has the highest degree of impact upon occurrence of storm surge with 3-meter wave. Meanwhile, Agdao Flyover, Bago Bridge, Bunawan Bridge 1, Bunawan Bridge 2, Panacan Bridge, Sasa Bridge Talomo Bridge 1 and Talomo Bridge 2 also have high degree of impact upon occurrence of storm surge 2-meter wave.

Table LU-98. Lifeline Utilities, Bridges, Degree of Impact Table for Storm Surge, Davao City

ROAD NAME	EXPOSURE			SENSITIVITY			IMPACT			
	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	DEGREE OF IMPACT			AVERAGE

Degree of Impact for Power Substations

Power Substations with moderate degree of impact are Sta. Ana Substation, Pampang Substation, Don Ramon Substation, Ponciano Reyes Substation, Gaisano Substation, Victoria Substation, Panacan Substation, Bunawan Substation, and Dumoy Substation. These substations are made of mostly of concrete and steel.

Table LU-99. Lifeline Utilities, Power Substations, Degree of Impact Table for Storm Surge with 2-meter wave, Davao City

EXPOSURE				SENSITIVITY/VULNERABILITY			DEGREE OF IMPACT		
NAME OF POWER PLANT	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN	GROUP 1	GROUP 2	AVERAGE
Sta Ana Substation	607.00	135 Million	135 Million	a) Perimeter Fence : Concrete High Wall Fence (5.5m HT) & Bended Metal Sheets b) Control Building: Concrete Wall and Floor ; with Roof deck c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	2	1	1.5
R.Castillo Substation	852.00	125 Million	125 Million	a) Perimeter Fence : Concrete High Wall Fence (3.5m HT) b) Control Building: Concrete Wall and Floor ; PU Panel Roof c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	1	1	1
Pampanga Substation	1031.00	118 Million	118 Million	a) Perimeter Fence : Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: G.I. Sheet walls, not insulated. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last upgraded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	2	2	2
Don Ramon Substation	15540.00	570 Million	570 Million	a) Perimeter Fence : Concrete High Wall Fence with Steel Grating (3.0m HT) b) Control Building: Concrete Wall and Floor ; G.I. Roof Panels c) Equipment Support : All Steel Structures	a) Operational b) Upgraded 5 years ago.	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	1	2	1.5

Degree of Impact for Level I Water System.

A total of 51 spring sources have high degree of impact. Each has a value of ₱41,586. All have good existing condition but does not have hazard resistant design.

Degree of Impact for DCWD Wells

A total of 14 DCWD wells have moderate degree of impact. They have good existing condition and with hazard resistant design.

Table LU-103. Lifeline Utilities, DCWD Production Wells, Degree of Impact Table for Storm Surge, Davao City

EXPOSURE			SENSITIVITY			DEGREE OF IMPACT
LOCATION	PUMP TYPE	REPLACEMENT COST	VALUE OF EXISTING LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN

Degree of Impact on National Roads

Davao-Bukidnon Road, Fatima-Malabog Road, Inawayan-Baracatan-Road, Fatima-Malabog Road and McArthur Highway have high degree of impact due to the exposure to the fault lines.

Table LU-106. Lifeline Utilities, Roads, Degree of Impact Table for Faultline, Davao City

Degree of Impact on Bridges

For the bridges, Lipada Bridge 1 and Lipadas Bridge 2 have high degree of impact due to its exposure to Dacudao Fault.

Table LU-107. Lifeline Utilities, Bridges, Degree of Impact Table for Faultline, Davao City

EXPOSURE				SENSITIVITY			IMPACT			
ROAD NAME	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	Degree of Impact			
							GROUP 1	GROUP 2	GROUP 3	Average
Lipadas Br. I	37.80	1,200,000.00	45,360,000	Concrete	Good	Yes	3	3	3	3.00
Lipadas Br. II	40.00	1,200,000.00	48,000,000	Concrete	Good	Yes	3	3	3	3.00

Degree of Impact on Level II Water Supply System

For the Level II Water Supply System, Manambulan, with its 3 HP well, has high degree of impact.

Table LU-108. Lifeline Utilities Level II Water System Degree of Impact Table for Faultline, Davao City

EXPOSURE				SENSITIVITY		IMPACT
BARANGAY	TYPE	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN	DEGREE OF IMPACT
MANAMBULAN	3 HP	60,500	60,500	FAIR	YES	3

Degree of Impact on Level III Water Supply System

Mainline pipes in Wangan, Calinan, Tugbok, Mintal, Catalunan Grande, Talomo, Los Amigos have moderate degree of impact.

Table LU-109. Lifeline Utilities Degree of Impact, Level III, Water System, Degree of Impact Table for Faultline, Davao City

EXPOSURE						SENSITIVITY		IMPACT
BARANGAY	TYPE	SIZE	REPLACEMENT COST	LENGTH	VALUE OF EXPOSED LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN	DEGREE OF IMPACT

ADAPTIVE CAPACITY

Roads

The 2nd Avenue, a minor road supplementary to major thoroughfares in Talomo has the lowest adaptive capacity. This road do not also have insurance fund for rehabilitation. Carlos P Garcia Highway Davao, Bukidnon Road, and Davao-Agusan Highway have moderate adaptive capacity. Moderate adaptive capacity means that addressing the impacts will require significant cost but it is still within the capacity of the system to adapt to potential impacts. It can accommodate within its resources, the cost for adapting and mitigating impacts.

Table LU-110. Lifeline Utilities, Roads, Adaptive Capacity Table for Flood, Davao City

ROAD NAME	EXPOSURE			IMPACT	SENSITIVITY	ADAPTIVE CAPACITY

Adaptive Capacity for Bridges

Davao River Bridge, Pangi Bridge, Suawan Bridge, Tamugan Bridge, Angalan Bridge III, Angalan Bridge IV, Angalan Bridge VI, Bato Bridge, Bolton Bridge 2, Generoso Bridge I, Libby Bridge, Lipadas Bridge I, Lipadas Bridge II, Pagan Grande, Pagan Pequeño, Piedad Bridge, and Talomo Bridge I have moderate adaptive capacity. All existing bridges do not have damage insurance coverage addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.

Table LU-111. Lifeline Utilities, Bridges, Adaptive Capacity Table for Flood, Davao City

NAME	HAZARD SUSCEPTIBILITY	EXPOSURE			IMPACT DEGREE OF IMPACT	INSURANCE COVERAGE	ADAPTIVE CAPACITY AVAILABLE GOVERNMENT RESOURCES	ADAPTIVE CAPACITY SCORE

Adaptive Capacity of Power Substations

Based on the assessment all power substations have high adaptive capacity, meaning the system is able to accommodate changes in climate, there are adaptation measures to address the impacts.

Table LU-112. Lifeline Utilities, Power Substations, Adaptive Capacity Table for Flood, Davao City

NAME OF POWER PLANT	EXPOSURE			IMPACT	ADAPTIVE CAPACITY		ADAPTIVE CAPACITY SCORE

Adaptive Capacity for Level I Water System

Deep wells located in Talomo River, Ula, Riverside have high adaptive capacity, while spring sources found in Bunawan, Tibungco, Panacan, Daliao, Lizada, Sirawan and Binugao have moderate adaptive capacity. The low adaptive capacity of spring sources could be attributed to the lack of insurance coverage, and optional available government resources. Also, spring sources found in slope areas could also be easily washed away by strong flood.

Lifeline Utilities Adaptive Capacity for Level III Water System

All mainline pipes have high adaptive capacity. According to DCWD, a team was mobilized to check and monitor the pipes.

DCWD Production Wells Adaptive Capacity Table to Flood

DCWD wells have high adaptive capacity. The wells are made with flood resilient materials. Monitoring stations built along with each well are also made of concrete and were built higher to withstand flood.

Cell Sites Adaptive Capacity to Flood

Built with steel and concrete materials, all cell sites have high adaptive capacity for flooding. These cell sites are placed on top of hills or buildings which makes it less susceptible to flood occurrence.

Adaptive Capacity of Roads to Landslide

Portions of Inawayan-Baracatan Road, Mabuhay-Pañalum-Paquibato Road, and Eden-Tagurano Road have low adaptive capacity. The length exposed for each road network are 5.2520 meters, 1.894 meters, and 0.3792 meters, respectively. Low adaptive capacity means that the utility is not flexible to accommodate changes in the climate. Addressing the impacts will be costly. The LGU and Government will require external assistance to address the impacts.

Adaptive Capacity of Bridges

Baracatan Bridge, Crossing Malabog Bridge, and Tagurano Bridge have moderate adaptive capacity. This means that addressing the impacts will require significant cost but it is still within the capacity of the system to adapt to potential impacts. It can accommodate within its resources the cost for adapting and mitigating impacts.

Table LU-118. Lifeline Utilities, Bridges, Adaptive Capacity Table for Landslide, Davao City

EXPOSURE				IMPACT	ADAPTIVE CAPACITY					
ROAD NAME	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	DEGREE OF IMPACT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES	ADAPTIVE CAPACITY SCORE			
							GROUP 1	GROUP 2	GROUP 3	AVERAGE
Baracatan Br.	22.20	1,200,000	26,640,000	2.0	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	DPWH-XI has available financial resources to fund improvements of national bridges, however fund availability will depend upon their current priorities. Also, the LGU can impose special levy taxes for project benefitting its local constituents but the latter may not be able to pay the additional taxes.	2	2	1	1.67
Crossing Malabog Br.	41.02	1,200,000	49,224,000	3.0	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	DPWH-XI has available financial resources to fund improvements of national bridges, however fund availability will depend upon their current priorities. Also, the LGU can impose special levy taxes for project benefitting its local constituents but the latter may not be able to pay the additional taxes.	2	2	2	2.00
Tagurano Br.	12.46	1,200,000	14,952,000	3.0	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies. Also, the LGU can impose special levy taxes for project benefitting its local constituents but the latter may not be able to pay the additional taxes.	2	2	1	1.67

Adaptive Capacity for Power Substations

Tibungco Substation which occupies 2,326 square meters and costing up to P118 million, has high adaptive capacity as it has all industrial risk insurance and comprehensive general liability.

Table LU-119. Lifeline Utilities, Power Substations, Adaptive Capacity Table for Landslide, Davao City

EXPOSURE				IMPACT	ADAPTIVE CAPACITY		Adaptive Capacity Score
Name	Area Occupied (sq.m)	Replacement Cost	Value of exposed Lifeline	Degree of Impact	Insurance Coverage	Available Government Resources	
Tibungco Substation	2,626.00	118 Million	118 Million	1.5	a) Industrial All Risk Insurance b) Comprehensive general Liability	NONE	1

Level I Water Supply, Adaptive Capacity Table for Landslide, 2018, Davao City

Seven spring sources found in Bunawan, Cabantian and Daliao have low adaptive capacity because spring sources do not have hazard resistance to landslide. This means that it will take a longer time for system to revert back to its daily function once the landslide would occur, consequently, this will incur severe damage to sources that lies in slopy areas.

Table LU-120. Lifeline Utilities, Level I Water Supply, Vulnerability Table for Landslide, Davao City

EXPOSURE			DEGREE OF IMPACT	ADAPTIVE CAPACITY		ADAPTIVE CAPACITY
BARANGAY	TYPE	REPLACEMENT COST	DEGREE OF IMPACT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES

Adaptive Capacity to Liquefaction

Adaptive Capacity of Roads

Agdao Flyover, Bonifacio Rotonda, C. P Garcia Highway, Claro M. Recto, Dacudao Avenue, Davao Bukidnon Road, Davao Agusan Highway, Don Julian Rodriguez Avenue (Ma-a), Jose P. Laurel, Leon Garcia St., McArthur Highway, Quezon Boulevard, Quimpo Boulevard, Quirino Avenue, Rafael Castillo St., Ramon Magsaysay Avenue, Sta. Ana Avenue, and Davao Agusan Highway have moderate adaptive capacity.

Table LU-125. Lifeline Utilities, Roads, Adaptive Capacity Table for Liquefaction, Davao City

ROAD NAME	TOTAL LENGTH (KILOMETERS)	REPLACEMENT COST PER LINEAR KILOMETER	TOTAL COST PER HAZARD LENGTH	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	AVAILABLE GOVERNMENT RESOURCES	HAZARD	DEGREE OF IMPACT	ADAPTIVE CAPACITY

Adaptive Capacity of Power Substations

All have high adaptive capacity, while these substations are not covered by any available government resources, internally, Davao Light and Power Co. has ensured that these stations be covered with Industrial All Risk Insurance and comprehensive general liability.

Adaptive Capacity of Level II Water System to Liquefaction

Wells found in Binugao, Sirawan, and Waan all have high adaptive capacity. There is no insurance coverage for each but there is warranty of 1 month if the water pump is installed by the supplier. Government resources is also available subject to proposal.

Table LU-128. Lifeline Utilities, Level II Water System, Adaptive Capacity Table For Liquefaction, Davao City

		BARANGAY	TYPE	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE		INSURANCE COVERAGE	AVAILABILITY OF GOVERNMENT RESOURCES	ADAPTIVE CAPACITY
W2-127	Toril	BINUGAO	2HP	46,200	46,200	2	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to fund proposal	1
W2-85	Toril	SIRAWAN	2HP	46200	46200	2	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to fund proposal	1
W2-86	Toril	SIRAWAN	2HP	46200	46200	2	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to fund proposal	1
W2-84	Toril	SIRAWAN	2HP	46200	46200	2	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to fund proposal	1
W2-19	Buhangin	WAAN	18GS20	46200	46200	2	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to fund proposal	1
W2-20	Buhangin	WAAN	2HP	46200	46200	2	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to fund proposal	1

Adaptive Capacity of Level III Water System to Liquefaction

A total of 433 mainlines located in Talomo, Buhangin, Agdao, Poblacion have a moderate adaptive capacity. These DCWD mainlines do not have insurance coverage but the DCWD has a reserve fund for the maintenance and repair.

Adaptive Capacity of DCWD Wells to Liquefaction

All 14 wells moderately and highly susceptible to liquefaction have high adaptive capacity. While there wells do not have insurance coverage, the DCWD has a reserve fund for the rehabilitation and maintenance of the wells.

Adaptive Capacity for Cell sites

A total of 26 cellsites have moderate adaptive capacity, while 143 have high adaptive capacity. These cell sites are found in Toril, Talomo, Agdao, Bunawan districts.

Adaptive Capacity of DCWD Wells

All of the DCWD wells have high adaptive capacity. The mainline pipes do not have insurance coverage but has DCWD fund for repairs and for improvement

Adaptive Capacity of Cell Sites

Two (2) cell sites in Toril, two (2) cell sites in Bunawan and one (1) cell site in Lasang have moderate adaptive capacity while the rest of the cell sites susceptible to storm surge have high adaptive capacity.

Adaptive Capacity of Roads

All roads highly and moderately susceptible to earthquake have moderate adaptive capacity. These roads have local fund for rehabilitation repair and improvement and quick response fund for its government resources.

Table LU-140. Lifeline Utilities, Roads, Adaptive Capacity Table for Faultline, Davao City

EXPOSURE		IMPACT	ADAPTIVE CAPACITY						
ROAD NAME	EXPOSED LENGTH (LINEAR KILOMETERS)	VALUE OF EXPOSED LIFELINE	DEGREE OF IMPACT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES	ADAPTIVE CAPACITY SCORE

Adaptive Capacity of Bridges

All bridges which are exposed to earthquake have moderate adaptive capacity.

Table LU-141. Lifeline Utilities, Bridges, Adaptive Capacity Table for Faultline, Davao City

EXPOSURE				IMPACT	ADAPTIVE CAPACITY					
NAME	EXPOSED LENGTH (LINEAR METERS)	REPLACEMENT COST PER LINEAR METER	VALUE OF EXPOSED LIFELINE	DEGREE OF IMPACT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES	ADAPTIVE CAPACITY SCORE			
							GROUP 1	GROUP 2	GROUP 3	AVERAGE
Lipadas Br. I	37.80	1,200,000.00	45,360,000	3.0	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes.	2	2	2	2.00
Lipadas Br. II	40.00	1,200,000.00	48,000,000	3.0	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/retrofitting using either national government fund resources or those funded by regional line agencies.	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes.	2	2	2	2.00

Adaptive Capacity of Level II Water Supply System

A well in Manambulan has low adaptive capacity.

Table LU-142. Lifeline Utilities, Level II Water System, Adaptive Capacity Table for Faultline, Davao City

EXPOSURE				IMPACT	ADAPTIVE CAPACITY			
BARANGAY	TYPE	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	DEGREE OF IMPACT	INSURANCE COVERAGE	AVAILABILITY OF GOVERNMENT RESOURCES	DEGREE OF IMPACT	ADAPTIVE CAPACITY
MANAMBULAN	3 HP	60,500	60,500	3	None, but there is warranty 1 month if the waterpump is installed by the supplier.	Yes. Subject to proposal		3

Adaptive Capacity of Level II Water Supply System

All mainline pipes have moderate adaptive capacity. It has DCWD fund for repair and rehabilitation.

Vulnerability Assessment of Roads for Flood

A total of 12 road networks measuring a total of 37 kilometers are highly vulnerable to flooding. These road networks include: Carlos P. Garcia Highway, Dacudao Avenue, Davao-Bukidnon Road, Davao - Agusan Highway, Don Julian Rodriguez Ave. (Maa Road), Inawayan-Baracatan Road, J.P. Cabaguio Avenue, Maa Radio Station St., Mc. Arthur Highway, Pichon St., Quimpo Boulevard, Quirino Avenue, and Rafael Castillo St.

Table LU-144. Lifeline Utilities, Roads, Vulnerability Table for Flood, Davao City

ROAD NAME	EXPOSED LENGTH (LINEAR KILOMETERS)	REPLACEMENT COST PER LINEAR KILOMETER	VALUE OF EXPOSED LIFELINE	DEGREE OF IMPACT	ADAPTIVE CAPACITY	VULNERABILITY SCORE	VULNERABILITY RATING

Vulnerability Assessment for Bridges

Davao River Bridge, Tamugan Bridge and Pangí Bridge have high vulnerability to flood. These bridges are located in areas highly susceptible to flood namely: Barangay Ma-a, Barangay Matina Crossing, and Barangay Tamugan. These bridges have high degree of impact and moderate adaptive capacity. Aside from that, bridges with moderate vulnerability are: Agdao Flyover, Angalan Bridge III, Angalan Bridge VI, Bato Br, Bolton Bridge 2, Generoso Bridge I, Generoso Bridge 2, Lipadas Bridge I, Lipadas Bridge 2, Pagan Grande, Pagan Pequeño, Piedad Br., Talomo Bridge 1, and Talomo Bridge 2. Bridges with moderate vulnerability are those which have high to moderate degree of impact and moderate adaptive capacity.

Map 5.17 Lifeline Utilities Vulnerability Map to Flooding, Davao City

Vulnerability Assessment of Power Substations

Substations which are highly susceptible to flood have low vulnerability to flood.

Table LU-148. Lifeline Utilities, Power Substations, Vulnerability Table for Flood, Davao City

Name of Power Plant	Area Occupied (sq.m)	Replacement Cost	Value of exposed Lifeline	Degree of Impact	Adaptive Capacity	Vulnerability Index	Vulnerability Category
Calinan Substation	1,000.00	140 Million	140 Million	2	1	2	LOW
Tugbok Substation	1,809.00	130 Million	130 Million	2	1	2	LOW
Matina Substation	1,000.00	120 Million	120 Million	2	1	2	LOW
Pampanga Substation	1,031.00	118 Million	118 Million	1.5	1	1.5	LOW

Vulnerability Assessment of Level I Water System

Thirty-one spring sources are moderately vulnerable to flood with the index score ranging (4-6). Two spring sources in Tibungco, two (2) spring sources in Panacan, four (4) spring sources in Lizada, and two (2) spring sources in Binugao have highest vulnerability score rate at six (6). This could be Databased to the high degree of impact rating and moderate adaptive capacity rating. Moreover, those which have vulnerability rating of 4 have both moderate degree of impact and moderate adaptive capacity.

Vulnerability Assessment of Level II Water System

A total of eight (8) level II water systems water systems are moderately vulnerable to flood. These are found in Sirawan, Marapangi, Daliaon Plantation, Waan and Tigatto. Moreover, the remaining 46 wells and 11 spring sources have low vulnerability to flood.

Vulnerability for Level III Water Supply

A total of five (5) main line pipes in Bago Aplaya ranging from (400-600 mm) in diameter are moderately vulnerable. Meanwhile, two main line pipes in Ilang, one in Matina Aplaya and one (1) in Tibungco are also moderately vulnerable. This is based to the moderate degree of impact and moderate adaptive capacity. These identified pipelines are those within the bridges. Those which got the low vulnerability index score predominantly have low degree of impact and high adaptive capacity.

However the adaptive capacity is high since DCWD is compliant to all applied standards. • The main line pipes identified have low vulnerability to flood 	<ul style="list-style-type: none"> • There will be disruption of regular operations due to damage of pipes. • There will be replacement cost/repair cost based on the degree of damage. 	<ul style="list-style-type: none"> • Strengthen contingency plans for alternative methods of water supply delivery to affected areas. • Strict implementation of material specification standards and construction (National building code of the Philippines; National Structural Code for Buildings

Map 5.15. Lifeline Utilities, Water Supply, Vulnerability Map to Flooding, Davao City

Vulnerability for Cell sites

All cell sites have low vulnerability rating. This is based on the moderate degree of impact and high adaptive capacity. As discussed in the adaptive capacity tables, these cell sites are not exposed to flood since majority are located in highly elevated areas.

Vulnerability to Landslide

Vulnerability of Roads to Landslide

The total road length highly vulnerable to landslide is 60.8778641 kilometers. It is divided among four road networks namely: Carlos P. Garcia Highway with a total length of 5.5451 kilometers, Davao-Bukidnon Road with the total length of 33.3586 kilometers, Fatima- Malabog Roads with 17. 5861 kilometers, and Toril-Bayabas-Eden Road. These road networks have high degree of impact and moderate adaptive capacity.

Vulnerability of Level II Water System to Landslide

A total of 74 spring sources found in Baguio District, Calinan District, Marilog District, Paquibato District, Toril and Tugbok District have high vulnerability to landslide. At the same time 81 wells found in Toril, Talomo, Bunawan, Tugbok, Buhangin, Calinan, and Paquibato are also highly vulnerable to landslide.

Matina Br.	<ul style="list-style-type: none"> • This bridge is located at Barangay Matina Crossing • Exposed length is 38.66 meters. • Degree of impact is high. • Adaptive capacity is high. • Total value of exposed length is 46,392,000 	<ul style="list-style-type: none"> • Saturated loose soil that would compromise the strength and stability of the foundation which affects the concrete and may lead to damage. • A portion of the bridge maybe damaged or totally. • Connecting roads cannot traverse due to maintenance/ replacement activity. • There will be disruption for road access. • Traffic congestion (due re-routing). • Delay of delivery of goods and services. 	<ul style="list-style-type: none"> • Crafting of contingency plans for emergency situation. • Re-routing scheme within the affected areas.
Panacan Br.	<ul style="list-style-type: none"> • This bridge is located at Barangay Bunawan • Exposed length is 23.53 meters. • Degree of impact is high. • Adaptive capacity is moderate. • Total value of exposed length is 28,236,000. 	<ul style="list-style-type: none"> • Saturated loose soil that would compromise the strength and stability of the foundation which affects the concrete and may lead to damage. • A portion of the bridge maybe damaged or totally. • Connecting roads cannot traverse due to maintenance/ replacement activity. • There will be disruption for road access. • Traffic congestion (due re-routing). • Delay of delivery of goods and services. 	<ul style="list-style-type: none"> • Crafting of contingency plans for emergency situation. • Re-routing scheme within the affected areas.
Sasa Br.	<ul style="list-style-type: none"> • This bridge is located at Barangay Buhangin. • Exposed length is 18.43 meters. • Degree of impact is high. • Adaptive capacity is high. • Total value of exposed length is 22,116,000. 	<ul style="list-style-type: none"> • Saturated loose soil that would compromise the strength and stability of the foundation which affects the concrete and may lead to damage. • A portion of the bridge maybe damaged or totally. • Connecting roads cannot traverse due to maintenance/ replacement activity. • There will be disruption for road access. • Traffic congestion (due re-routing). • Delay of delivery of goods and services. 	<ul style="list-style-type: none"> • Crafting of contingency plans for emergency situation. • Re-routing scheme within the affected areas.

Map 5.18. Lifeline Utilities, Vulnerability Map to Active Fault and Liquefaction, Davao City

Vulnerability for Power Substations

A total of 13 Substations have low vulnerability to liquefaction this is due to the high adaptive capacity of the substations.

Table LU-175. Lifeline Utilities, Power Substations, Vulnerability Table for Liquefaction, Davao City

Table LU-182. Climate Change Vulnerability Assessment Summary Matrix of Level III Water Supply System for Liquefaction, Davao City

AREA NAME	TECHNICAL FINDINGS	IMPLICATIONS	POLICY INTERVENTIONS
5-A	<ul style="list-style-type: none"> A total of 7 lines with diameters: 300, 150, 350, 750, 600 mm are exposed to high liquefaction. The total length exposed to liquefaction is 587. 89 m. The degree of impact is moderate, the adaptive capacity is moderate as DCWD is compliant to all applied standards. 	<ul style="list-style-type: none"> There will be disruption of regular operations due to damage of pipes. There will be replacement cost/repair cost based on the degree of damage. 	<ul style="list-style-type: none"> Strengthen contingency plans for alternative methods of water supply delivery to affected areas. Vulnerability of DCWD Wells

All four wells susceptible to liquefaction have low vulnerability. This is attributed to high adaptive capacity of wells.

Map 5.20. Lifeline Utilities, Cell sites, Vulnerability Map to Liquefaction, Davao City

Vulnerability of National Roads to Storm Surge

Portions of C.P Garcia Highway, Dacudao Avenue, Davao-Agusan Highway, Florentino Torres St., J.P. Cabaguio, J.P Laurel, Libby Road, McArthur Highway, Old Airport, Pichon St., Quimpo Boulevard, Quimpo Avenue, and McArthur Highway are highly vulnerable to storm surge. This is due to high degree of impact and low adaptive capacity rating.

Vulnerability of Bridges

Almost all bridges have low vulnerability. This is due to the high adaptive capacity for storm surge.

Map 5.21 Lifeline Utilities, Vulnerability Map to Storm Surge, Davao City

Vulnerability of Power Substations

All power substations have low vulnerability. Such could be based to the high adaptive capacity of each substations with low degree of impact.

Vulnerability of Level I Water Supply

All spring sources which are susceptible to storm surge have high vulnerability to storm surge. This is due to the high degree of impact and low adaptive capacity rating.

Vulnerability of Level II Water System

The two wells which are susceptible to 2-meter wave are moderately vulnerable this is due to the high degree of impact and low adaptive capacity.

Vulnerability of Level III Water System to Storm Surge

A total of 361.61 meters of pipelines found in Bago Aplaya are moderately vulnerable to storm surge with 4-meter wave. Meanwhile, 529.87 meters of pipe in Dumoy, 815.86 meters of pipe in Bago Aplaya, 275.23 meters of pipe in Talomo, 180.4 meters of pipe in Ilang, and 56.03 meters of pipe found in Matina Aplaya are moderately vulnerable to storm surge with 5-meter wave.

Vulnerability of Roads

A total of 0.0760 kilometers of Davao Bukidnon Road is moderately vulnerable to earthquake. This is identified to be the highest road length vulnerable to earthquakes. Such road network is the road length which is exposed to three fault lines: 0.0482 kilometers of the same road length is exposed to Dacudao Fault; 0.0179 kilometers is exposed to Lacson Fault; and 0.0100 kilometers is exposed to Tamugan Fault.

Table LU-201. Lifeline Utilities, Roads, Vulnerability Table for Faultline, Davao City

Disaster Risk Assessment for Flood

Lifeline Utilities subjected to the Climate Change Vulnerability Assessment has also undergone Risk Assessment. The difference between the two is that the risk adds up likelihood of occurrence, which is the frequency hazard to hit the area based from the historical data of calamities in Davao City.

Risk score is the product of severity of consequence and likelihood of occurrence. For this study, severity of consequence measures length of disruption which will be experienced by consumers upon heavy damage due to hazard

Severity of Consequence Estimation for Roads

Carlos P. Garcia Highway, Davao Bukidnon Road and McArthur Highway have low severity of consequence, which means that six hour disruption is imminent in case of strong flood occurrence. The likelihood of occurrence in Carlos P. Garcia Highway has a range of 4.5 to 6.5 which means that there is moderate to frequent likelihood of flood occurrence in the area. The Davao Bukidnon Road also has low severity of consequence, and moderate to frequent likelihood of occurrence. Lastly, for McArthur Highway, the whole stretch has moderate to frequent likelihood of flood occurrence.

Table LU-208. Lifeline Utilities, Roads, Severity of Consequence Estimation for Flood, Davao City

Severity of Consequence Estimation for Bridges

Bunawan Bridge 1, Bunawan Bridge 2, Davao River Bridge, Panacan Bridge have occasional likelihood of occurrence and moderate severity of consequence. On the other hand, bridges with moderate likelihood of occurrence are Pagan Pequeño, Suawan Bridge, Talomo Bridge 1, and Talomo Bridge 2. They also have moderate severity of consequence, which means that there will be disruption of service by less than six hours. Matina Bridge, Pagan Grande, Pangí Bridge, and Tamugan bridge are in areas with frequent likelihood of flood occurrence and the flood level is >1 meters. The severity of consequence to flood to these bridges is moderate.

Severity of Consequence Estimation for Power Substations

Calinan Substation, Tugbok Substation, Matina Substation and Pampanga Substation are the substations located in areas with high flood susceptibility. However, only Tugbok and Matina Substations are located in areas with frequent likelihood of flood occurrence. These two (2) substations have low severity of consequence which means disruption of services by less than 6 hours. Calinan Substation highly susceptible to flood has been estimated to have low severity of consequence, and is located in an area with moderate likelihood of flood occurrence.

Table LU-210. Lifeline Utilities, Power Substations, Severity of Consequence Estimation for Flood , Davao City

FLOOD SUSCEPTIBILITY	HAZARD		EXPOSURE		SENSITIVITY/VULNERABILITY			SEVERITY OF CONSEQUENCE SCORE
	LIKELIHOOD OF OCCURRENCE SCORE	FLOOD DEPTH (M)	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN	
High/Very High	5	≥1	1,000.00	140 Million	a) Perimeter Fence : Concrete High Wall Fence (5.5m HT) b) Control Building: Concrete Wall and Floor ; with Roofdeck c) Equipment Support : All Steel Structures	a) Operational b) Newly Upgraded	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance f) Sabotage & Terrorism	1
High	6	≥1	1,809.00	130 Million	a) Perimeter Fence : Concrete High Wall Fence (2.5m HT); and 2" cyclone wire Fence along road-side b) Control Building: Prepainted Metal Sheet Cladding Wall and Concrete Floor ; Prepainted Roofing Sheet. c) Equipment Support : All Steel Structures	a) Operational b) Upgraded Within past 5 years	a) Typhoon Resistance b) Earthquake Resistance c) Fire Resistance d) Flood Resistance e) Oil Spill Resistance	1

Moderate	3	<1	1,031.00	118 Million	a) Perimeter Fence : Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: G.I. Sheet walls, not insulated. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last upgraded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	1

Severity of Consequence Estimation of Level Water System

A total of 33 Level I sources that are highly or moderately susceptible to flood are located in areas with improbable to frequent likelihood of flood occurrence. The Bunawan area with a total of two (2) spring sources have the highest likelihood of occurrence. Moreover, areas assessed with high severity of consequence are Tibungco, Panacan, Lizada and Binugao.

Severity of Consequence Estimation for Level II Water System

Sirawan spring source and Malagos spring source are located in areas with occasional likelihood of flood occurrence. These sources have high and moderate estimation for severity of consequence, respectively. The remaining sources found in Binugao, Daliaon Plantation, Salaysay are in areas with improbable likelihood of occurrence of flood, with three sources estimated to have moderate severity of consequence. One sole spring found in Daliaon Plantation has been estimated to have high severity of consequence.

Severity of Consequence Estimation for Level III Water System

All 385 mainline pipes which are highly susceptible to flood have been estimated to have moderate severity of consequence. These mainlines are found in 19-B, 2-A, Angliongto Bago Aplaya, Bago Gallera, Bucana, Cabantian, Calinan, Catalunan Grande, Communal, Ilang, Los Amigos, Lubogan, Ma-a, Mandug, Matina Aplaya, Matina Crossing, Matina Pangi, Mintal, Pampanga, Riverside, Sasa, Sto. Niño, Tacunan, Talomo, Tibungco, Tigatto, Tugbok, Ubalde, and Wangan. All these main line pipes are within areas with moderate to frequent likelihood of flood occurrence.

Severity of Consequence Estimation for Level III DCWD Wells

Of 26 DCWD wells, 12 wells are moderately and highly susceptible to flood. These wells are also located in Talomo, Bago Aplaya, Tugbok and Los Amigos, which have moderate to frequent likelihood of flood occurrence. All of these wells are estimated to have low severity of consequence.

Table LU-214. Severity of Consequence Estimation of DCWD Wells for Flood, Davao City

LOCATION	FLOOD	DEPTH	LIKELIHOOD OF OCCURRENCE SCORE	REPLACE-MENT COST COS	VALUE OF EXISTING LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN	INSURANCE COVERAGE	AVAILABILITY OF GOVERNMENT RESOURCES	SEVERITY OF CONSEQUENCE

Disaster Risk Assessment for Landslide

Severity of Consequence Estimation for Roads

Carlos P. Garcia Highway and Davao-Bukidnon Road have moderate severity of consequence. It can be noted that these road have areas with frequent likelihood of occurrence of landslide.

Table LU-216. Lifeline Utilities, Roads, Severity of Consequence Estimation Table for Landslide, Davao City

ROAD NAME	HAZARD		EXPOSURE			SENSITIVITY			SEVERITY OF CONSEQUENCE

Severity of Consequence Estimation for Bridges

Baracatan Bridge, Tagurano Bridge, and Crossing Malabog Bridge are susceptible to landslide. The likelihood of landslide occurrence in the location the bridges is rare. The severity of consequence for these bridges is low.

Table LU-217. Lifeline Utilities, Bridges, Severity of Consequence Table for Landslide, Davao City

BRIDGE NAME	TOTAL LENGTH (METERS)	ROAD CLASSIFICATION	REPLACEMENT COST PER LINE-AR METER	TOTAL COST PER HAZARD LENGTH	SURFACE TYPE	EXISTING CONDITION	HAZARD RESISTANT	INSURANCE COVERAGE	AVAILABLE GOVERNMENT RESOURCES	SEVERITY OF CONSEQUENCE SCORE
Baracatan Br.	22.20	17min- 38 max	1,200,000.00	26,640,000.00	Bailey	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/ retrofitting using either national government fund resources or those funded by regional line agencies	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes	1.0
Crossing Malabog Br.	41.02		1,200,000.00	49,224,000.00		Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/ retrofitting using either national government fund resources or those funded by regional line agencies	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes	1.0
Tagurano Br.	12.46	17min- 38 max	1,200,000.00	14,952,000.00	Bailey	Good	Yes	All existing bridges do not have damage insurance coverage. Addressing damages are mostly done thru repairs/ retrofitting using either national government fund resources or those funded by regional line agencies	Regional DPWH has available financial resources to fund national bridges improvements but fund availability will depend on their current priorities. Also, LGU can impose special levy taxes for project benefitting its local constituents but local capacities may not be able to pay the additional taxes	1.0

Severity of Consequence Estimation for Power Substations

Only Tibungco Substation is moderately susceptible to landslide and likelihood of landslide occurrence is also rare. The severity of consequence is low.

Table LU-218. Lifeline Utilities, Power Substations, Severity of Consequence Estimation for Landslide, Davao City

NAME OF POWER PLANT	HAZARD		EXPOSURE		SENSITIVITY/VULNERABILITY			SEVERITY OF CONSEQUENCE SCORE
	LANDSLIDE SUSCEPTIBILITY	LIKELIHOOD OF OCCURRENCE SCORE	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN	
Tibungco Substation	Moderate	1	2,626.00	118 Million	a) Perimeter Fence :CHB Fence with top Guard Cyclone Wire (2") on G.I. Pipe Frame b) Control Building: P.U. Panel walls and roof. c) Equipment Support : All Galvanized Steel Structures	a) Operational b) Last upgraded 10 yrs ago.	b) Earthquake Resistance d) Flood Resistance e) Oil Spill Resistance	1

Severity of Consequence Estimation for Level I Water System

Spring sources in Bunawan, Panacan, Daliao San Isidro are in areas with occasional likelihood of landslide occurrence. These areas have very high severity of occurrence estimation.

Table LU-219. Lifeline Utilities, Level Water Supply , Severity of Consequence Estimation for Landslide, Davao City

Severity of Consequence Estimation for Level II Water System

A total of 26 sources found in Carmen, Suawan, Tambobong, Salaysay, Marilog, Megkawayan, Gumitan, Lumiad, Marilog are situated in areas with occasional to frequent likelihood of landslide occurrence. Marilog and Tapak have frequent likelihood of landslide occurrence. As to the severity of consequence, a very high severity of consequence is expected to all 26 sources primarily because they are all spring sources and their sensitivity is very high without any hazard resistant design.

Severity of Consequence Estimation for Level III Water System

Buhangin, Talomo, Tigatto, have moderate likelihood of landslide occurrence. While, barangays 19-B, Ma-a, Langub, Panacan, Catalunan Grande have occasional likelihood of landslide occurrence. Based on the assessment, a total of 11 barangays have high severity of consequence. These barangays are 19-B, Buhangin, Matina Pangi, Langub, Ma-a, Magtuod, Talomo, Panacan, Catalunan Grande, Matina Crossing, and Tigatto.

Severity of Consequence Estimation for DCWD Wells

There are a total of two (2) wells found in Panacan an area with occasional/slight chance of landslide occurrence. There is however, low severity of consequence for these wells.

Table LU-222, Lifeline Utilities, DCWD Wells, Severity of Consequence Estimation for Landslide, Davao City

EXPOSURE					VULNERABILITY		SEVERITY OF CONSEQUENCE
LOCATION	SUSCEPTIBILITY	LIKELIHOOD OF OCCURRENCE	REPLACEMENT COST	VALUE OF EXPOSED LIFELINE	EXISTING CONDITION	HAZARD RESISTANT DESIGN	SEVERITY OF CONSEQUENCE

Table LU-225. Disaster Risk Assessment Summary Matrix of Roads for Flood, Davao City

ROAD NAME	TECHNICAL FINDINGS	IMPLICATIONS	POLICY INTERVENTIONS
Carlos P. Garcia Highway	<ul style="list-style-type: none"> This road network are at moderate risk to flood. The road network has severity of consequence of 1. The flood level is ≥ 1 meters. A total of 0.827 kilometers of road network exposed at barangay Matina Crossing has moderate likelihood of flood occurrence. A total of 0.111852 kilometers of road network exposed at Talomo and Matina Crossing has frequent likelihood of flood occurrence. A total of 0.1131024 kilometers of road network exposed at barangay Tigatto and Buhangin has moderate likelihood of flood occurrence A total of 0.296142 kilometers of road network exposed at barangay Ma-a and Tigatto has an occasional/slight chance likelihood of flood occurrence The total value exposed line is ₱ 80,885,795.52 . 	<ul style="list-style-type: none"> There will be disruption for road access depending on the severity of impact. Traffic congestion (due re-routing). Delayed delivery of goods and services. Appropriation of fund for maintenance/ replacement based on the degree of damage to drainage lines. 	<ul style="list-style-type: none"> Re-routing scheme within the affected areas. Crafting of contingency plans for emergency situation.

Table LU-225. Disaster Risk Assessment Summary Matrix of Roads for Flood, Davao City

ROAD NAME	TECHNICAL FINDINGS	IMPLICATIONS	POLICY INTERVENTIONS
Davao - Bukidnon Road	<ul style="list-style-type: none"> • This road network is at moderate risk to flood. • The road network has low severity of consequence estimation. • The flood level is ≥ 1 meters. • A total of 1.44858 kilometers of road network exposed at Barangay Tamugan has frequent likelihood of flood occurrence • A total of 0.983502 kilometers of road network exposed at Barangay Tamugan and Suawan has frequent likelihood of flood occurrence • A total of 1.612797 kilometers of road network exposed at Barangay Suawan and Talomo has moderate likelihood of flood occurrence. • The total value exposed line is ₱161,795,160.00 	<ul style="list-style-type: none"> • There will be disruption for road access depending on the severity of impact. • Traffic congestion (due re-routing). • Delayed of delivery of goods and services. • Appropriation of fund for maintenance/ replacement based on the degree of damage to drainage lines. 	<ul style="list-style-type: none"> • Re-routing scheme within the affected areas. • Crafting of contingency plans for emergency situation.
Mc. Arthur Highway	<ul style="list-style-type: none"> • This road network is at moderate risk to flood. • The road network has low severity of consequence estimation. • The flood level is ≥ 1 meters. • A total of 0.753495 kilometers of road network exposed at Barangay Matina Crossing has frequent likelihood of occurrence (1-3 years). • A total of 0.410542 kilometers of road network exposed at Barangay Matina Crossing and Talomo has frequent likelihood of occurrence • The total value exposed line is ₱65,186,072.00 	<ul style="list-style-type: none"> • There will be disruption for road access depending on the severity of impact. • Traffic congestion (due re-routing). • Delay of delivery of goods and services. • Appropriation of fund for maintenance/ replacement based on the degree of damage to drainage lines. 	<ul style="list-style-type: none"> • Re-routing scheme within the affected areas. • Crafting of contingency plans for emergency situation.

Risk Assessment for Bridges

Matina Bridge, Pagan Grande, Pangi Bridge, and Tamugan bridge have high risk scores. It is noted that these bridges are in areas with frequent likelihood of flood occurrence and the flood level is >1 meters. The severity of consequence estimation of these bridges is moderate, which means that there will be a of less than six hours disruption once the area upon occurrence of extreme flooding event. Pangi Bridge with an exposed length of 121.69 meters has the highest exposed length. Damage to this bridge due to flood had been reported in June 2019.

Map 5.26 Lifeline Utilities, Risk Map to Flooding, Davao City

Risk Assessment for Power Substations

Calinan, Tugbok and Matina Substations are at moderate risk to flood. These substations are identified to be in areas with frequent likelihood of occurrence and low severity of consequence. Tugbok Substation has the largest occupied area of 1,809 square meters. This substation has been upgraded in the last 5 years and it has hazard resistant design for flood.

Table LU-227. Lifeline Utilities, Power Substations, Risk to Flood, Davao City

NAME OF POWER PLANT	HAZARD			EXPOSURE		SENSITIVITY/VULNERABILITY			SEVERITY OF CONSEQUENCE SCORE	RISK SCORE	RISK CATEGORY
	FLOOD SUSCEPTIBILITY	LIKELIHOOD OF OCCURRENCE SCORE	FLOOD DEPTH (M)	AREA OCCUPIED (SQ.M)	REPLACEMENT COST	CONSTRUCTION MATERIALS USED	EXISTING CONDITION	HAZARD RESISTANT DESIGN

Risk Assessment for Level II Water System

Only one spring source is at high risk to flood. This spring source is located in an area with improbable likelihood of flood occurrence and the severity of consequence is high. The flood level is more than 1 meter and the replacement cost of such spring source is 41,586.32.

Two spring sources in Binugao and one spring source in Salaysay are at moderate risk to flood. These sources are in areas with improbable for flood and each are also exposed to moderate severity of consequence.

Risk Assessment for Level III Water System

Out of 385 mainline pipes which are highly susceptible to flood with moderate severity of consequence rating, only 116 lines are at high risk to flood, while others are at moderate risk. These mainlines are found in 19-B, Ma-a, Mandug, Matina aplaya, Matina crossing, Matina Pang, Talomo, Tigatto and Tugbok. These areas are identified to have frequent likelihood of occurrence for flood. As to the severity of consequence all 385 mainlines have moderate severity of consequence which means that there will be disruption of service by less than six hours in case of extreme flooding occurrence.

Disaster Risk Assessment for DCWD Wells

A total of 12 wells located in Talomo, Bago-Aplaya, Tugbok and Los Amigos are at moderate risk to flood. Interventions for this are retrofitting of structures to prevent damage due to flood.

Map 5.28 Lifeline Utilities, Risk Map to Flooding, Davao City

Disaster Risk Assessment for Roads

Out of 72.06 kilometers which are moderately and highly susceptible to landslide, 0.67 kilometers of Davao-Bukidnon Road is at high risk of landslide, while 5.57 kilometers of C.P Garcia Highway is moderately at risk of landslide. The remaining length or 64.82 kilometers are at low risk of landslide.

Disaster Risk Assessment for Level II Water System

For Level II Water System, a total of 28 spring sources and one well are at high risk of landslide. These are found in barangays Callawa, Carmen, Gumitan, Lumiad, Magsaysay, Marilog, Megkwayan, Suawan, Tambobong and Tapak. This is attributed to the occasional to frequent occurrence of landslide in these areas. A very

Disaster Risk Assessment for Level III Water System

Of 52 mainlines with a total length of 11, 137.98 meters moderately and highly susceptible to landslide, 8,112.84 meters are at high risk to landslide. These length has a total equivalent value of Php 259,807,317.09. These mainline pipes are in areas with occasional to frequent likelihood of landslide occurrence. These areas are Barangay 19-B, Catalunan Grande, Langub, Ma-a, Matina Crossing, Matina Pangi, Panacan, Talomo and Tigatto. These lines have been assessed to have

Map 5.29 Lifeline Utilities, Risk Map to Landslide, Davao City

Disaster Risk Assessment for Cell sites

A total of 23 out of 26 cell sites are assessed to be moderately at risk to landslide. These cell sites are found in Matina Aplaya, Matina Crossing, Ma-, Talomo, Talomo Proper and Bucana. It is noted that Matina Aplaya, Talomo and Matina Crossing have frequent likelihood of occurrence of landslide. The cell sites in the area also have low severity of consequence.

Map 5.30 Lifeline Utilities, Risk Map to Landslide, Davao City

Lifeline Utilities Major Decision Areas (MDA)

In the following pages are the decision areas identified according to the concentration of hazards per barangays and the lifeline utilities affected.

Major Decision Area 1

Major Decision Area-1 includes Suawan, Tamugan, Malabog, Talomo, Matina Crossing, Ma-a, Matina Pangi Tugbok, Mintal and Tacunan. The first cluster includes Suawan-Tamugan-Malabog. This cluster is identified to be MDA-1 because of two bridges at high risk of flood, road portions at high risk to landslide occurrence, and road portions moderately vulnerable to flood. Talomo-Matina Crossing-Matina Pangi-Ma-a -Matina Pangi is the second cluster identified as MDA-1. This cluster is considered because of the presence of bridges, road portions, a number of cell sites and main water lines that are at high risk to flood. Some road portions in this area is also at high risk to landslide occurrence, and vulnerable to active fault and liquefaction. The last cluster for MDA-1 is the Tugbok- Mintal- Tacunan because of the presence of three active fault lines, main line pipes which are at high or moderately at risk to flood.

LOCATION	HAZARDS
Suawan-Tamugan-Malabog	Landslide, Flood, Earthquake
Talomo-Matina Crossing-Matina Pangi-Ma-a	Flood, Liquefaction, Landslide, Earthquake
Tugbok-Mintal-Tacunan	Active Fault (Lacson Fault and Dacudao Fault), Flood

Major Decision Area 2 (MDA-2)

Portions of Buhangin, Magtuod are considered as MDA-2 because of portions C.P Garcia Highway are at risk of flood and landslide. Panacan is also considered as MDA-2 because of the Panacan Bridge which is moderately at risk to flood. The same barangay also have storm surge vulnerability. There are also wells which are at risk of landslide. Bunawan is also included because it has one bridge with high flood risk. Toril Daliao and Lizada, primarily the water sources in

LOCATION	HAZARDS
Buhangin-Magtuod	Flood, Landslide
Panacan	Flood, Storm Surge, Landslide
Toril-Daliao-Lizada	Flood, Storm Surge, Liquefaction
19-B	Storm Surge, Liquefaction

Major Decision Area 3 (MDA-3)

For MDA-3, Lumiad, Paquibato and Malabog are considered because of the Level III Water system sources which are at high risk of landslide.

Table LU-254. Summary of Utilities exposed to Flood and Landslide Risk, Davao City

TYPE OF LIFELINE UTILITY	FLOOD				LANDSLIDE			
	HIGH		MODERATE		HIGH		MODERATE	
	NUMBER	LENGTH	NUMBER	LENGTH	NUMBER	LENGTH	NUMBER	LENGTH
Roads	-	-	3	6.55 kms				
Bridges	4	310.79 m	8	493.33 m	-	-	-	-
Power Substations	-	-	3	-	-	-	-	-
Level I	21		12		1			
Level II	8		10		29	-	-	
Level III	116	16,830.42 meters	192	23,295.48 meters	33	8,112.84 meters	7	1,715.77 meters
DCWD Wells			10				2	
Cell sites			22				14	

The interventions and recommendations for these areas include:

- Crafting of contingency plans for emergency situation.
- Establishment of alternate roads parallel to existing bridge, to ensure uninterrupted linkage.
- Strengthen the slope protection projects by concerned agencies.
- Hazard retrofitting of existing structure.
- Construct flood resistant river dike system especially before and after bridges that have been classified into moderate/high risk.
- Road concreting and increase road elevation above the flood height. Establish road embankment protection.
- Improve drainage to allow flood waters to flow through culverts.
- Strengthen contingency plans for standby 24/7 services for water supply in case of interruption.
- Strict implementation of material specification standards and construction (National building code of the Philippines; National Structural Code for Buildings; American National Standard Institute/American Water works Association; Standard Specifications and American Society for Testing and Materials.
- Immediate actions and alternative solutions like mobile towers in terms of telecommunication interruptions.

Table LU-255. Major Decision Areas- 1 Matrix

DECISION AREAS	BARANGAY DESCRIPTION	PROBLEMS/HAZARDS	IMPACTS/IMPLICATIONS	POLICY INTERVENTIONS
SUAWAN	Locational Characteristics: Riverbank Rural/Urban Classification: Rural Barangay Likelihood of Occurrence for Flood: Occasional (Every>10-30 years) Likelihood of Occurrence for Landslide: Moderate (Every >3-10years)	<ul style="list-style-type: none"> ● Portion of Davao Bukidnon Road in this area is at high risk of landslide. ● Four (4) Level II water system spring sources are at high risk of landslide ● Pagan Pequeño Bridge and Suawan Bridge are moderately at risk of flood. 	<ul style="list-style-type: none"> ● Interruption of main road access/linkage to Bukidnon from Davao City and interruption of road access from Barangay Suawan to Poblacion due to moderate landslide events. There will be interruption of the traffic flow once there Pagan Pequeño Suawan Bridge will overflow. ● Spring sources of water may be destroyed or covered by the debris of landslide that will cause water supply shortage for residents of Suawan 	<ul style="list-style-type: none"> ● Crafting of contingency plans for emergency situation. ● Strengthen the slope protection projects by concerned agencies. ● Hazard retrofitting of existing structure ● Construct flood resistant river dike system especially before and after bridges that have been classified into moderate/high risk
TAMUGAN	Locational Characteristics: Riverbank Rural/Urban Classification: Rural Barangay Likelihood of Occurrence for Flood: Frequent (Every 1-3 years) Likelihood of Occurrence for Landslide: Frequent (Every 1-3 years)	<ul style="list-style-type: none"> ● Pagan Grande and Tamugan Bridge are at high risk of flood. ● Portion of Davao Bukidnon Road in this barangay is moderately vulnerable to active fault. 	<ul style="list-style-type: none"> ● Interruption of main road access/linkage to Bukidnon from Davao and Barangay Tamugan to Polacion due to possible overflow of the bridges due to frequent flood events. ● Short interruption of traffic flow due to damage caused by earthquake. 	<ul style="list-style-type: none"> ● Road concreting and increase road elevation above the flood height. Establish road embankment protection ● Improve drainage to allow flood waters to flow through culverts.
GUMALANG	Locational Characteristics: Riverbank Rural/Urban Classification: Urban Likelihood of Occurrence for Landslide: Occasional (Every>10-30 years)	<ul style="list-style-type: none"> ● Portion of Davao Bukidnon Road is at high risk of Landslide. ● Level 2 water supply source is at risk of flood. 	<ul style="list-style-type: none"> ● Interruption of main road access/linkage to Bukidnon from Davao. ● There will be temporary water interruption depending on the severity of impact. ● There will be replacement cost/repair cost based on the degree of damage. 	<ul style="list-style-type: none"> ● Crafting of contingency plans for emergency situation. ● Strengthen the slope protection projects by concerned agencies.

Table LU-255. Major Decision Areas- 1 Matrix

DECISION AREAS	BARANGAY DESCRIPTION	PROBLEMS/HAZARDS	IMPACTS/IMPLICATIONS	POLICY INTERVENTIONS
MALABOG	Locational Characteristics: Riverbank Rural/Urban Classification: Rural Barangay	<ul style="list-style-type: none"> • Portion of Fatima-Malabog road in this barangay is vulnerable to active fault. 	<ul style="list-style-type: none"> • Road from barangay Malabog to Poblacion may become unpassable due to moderate risk to landslide and vulnerability to earthquake 	<ul style="list-style-type: none"> • Establishment of alternate routes. • Crafting of contingency plans for emergency situation. • Road Concreting and increase adaptive capacity • Slope protection project
MATINA CROSS-ING	Locational Characteristics: Riverbank/Inland Rural/Urban Classification: Urban Likelihood of Occurrence for Flood: Frequent (Every 1-3 years) Likelihood of Occurrence for Landslide: Frequent (Every 1-3 years)	<ul style="list-style-type: none"> • Portion of Matina Bridge is at high risk to flood • Portion of C.P Garcia Highway and McArthur Highway is at moderate risk to flood. • Portion of C.P Garcia Highway is at moderately risk to landslide. • Portion of Carlos P. Garcia Highway is highly vulnerable to liquefaction. 	<ul style="list-style-type: none"> • Interruption of road access in Matina Crossing due to overflow of Matina Bridge in the event of flood. • Road access in C.P Garcia Highway that leads to Barangay Buhangin, Cabantian, Ma-a, Matina Crossing, Talomo and Tigatto will be interrupted due to the flooding. • There will be heavy flow of traffic within Matina Crossing due to the flood in McArthur Highway. • An interruption of flow of traffic in C.P Garcia will also be expected in case of landslide 	<ul style="list-style-type: none"> • Hazard retrofitting of existing structure • Construct flood resistant river dike system especially before and after bridges that have been classified into moderate/high risk
MATINA PANGI	Locational Characteristics: Riverbank Rural/Urban Classification: Urban Likelihood of Occurrence for Flood: Frequent (Every 1-3 years) Likelihood of Occurrence for Landslide: Frequent (Every 1-3 years)	<ul style="list-style-type: none"> • Matina Pangi Bridge is at high risk to flood. • Portion of C.P Garcia Highway is at moderate risk to landslide. 	<ul style="list-style-type: none"> • Overflow of Pangi Bridge can cause heavy traffic and inconvenience to the riding public. • Interruption of transportation along CP Garcia Highway-Matina Pangi portion that connects barangays Buhangin, Langub, Ma-a, Magtuod, and Matina Crossing once landslide would occur. 	<ul style="list-style-type: none"> • Hazard retrofitting of existing structure • Construct flood resistant river dike system especially before and after bridges that have been classified into moderate/high risk

CLIMATE CHANGE VULNERABILITY ASSESSMENT

Natural Resource-Based Production Areas (NRBPAs) cover agriculture, forestry, and fishery production areas. Changes in climate and incidences of different calamities may potentially hamper these areas and result to the reduction on agricultural production, low food supply, and coastal and forest ecosystem degradation. Indeed, there is a need to consider the potential threats of natural hazards and climate change. Without considering the threats, interventions may lead to creation of new risks and maladaptation. Unsustainable utilization and management of natural resources may as well be among the factors that generate new risks by exposing vulnerable elements in hazard prone areas. As way to reduce the impacts on NRBPAs, a climate change vulnerability assessment is conducted, where the vulnerable areas are identified recommended policy interventions are provided.

Natural Resource-Based Production Area Exposure Attributes

The succeeding tables include information on the area allocated for NRBPAs, dominant crop or variety in the area, annual production output per hectare, number of farmers who employ sustainable production techniques, proportion of population engaged in production aware of natural hazards associated with climate change, proportion of production areas covered by hazard control measures, and other pertinent details related to agriculture, forestry, and fishery production areas. Below are the summary of the tables per hazard:

Flood – A total of 129 barangays, which have NRBPAs, are susceptible to floods. Of the total, 82 barangays are mostly planted with coconuts, which occupy a combined land size of 77,489 hectares and reaped an annual average output per hectare at ₱2,983,870 (Table NR – 1). There are also 4,583 farming families who attended climate field school, 4,659 farming families who use sustainable production techniques, and 5,463 farmers who have access to hazard information. The remaining barangays, on the other hand, have different dominant varieties. Vegetables are dominant in Buda and Salumay (2,104.36 hectares) while rice is largely planted in Calinan, Gumitan, and Los Amigos (1,790.22 hectares). Corn is widely planted in Lumiad, Baganihan, and Magsaysay in farms that total to 2,635 hectares. Bananas, whether for local or international markets, are propagated in areas that span 7,798.81 hectares in Tigatto, San Isidro, Sirib, Tamayong, Salaysay, Bago Aplaya, Pañalum, and Dalian Plantation. Pelagic fishes also dominate in Matina Aplaya and Lasang (460.68 hectares) while catfish (hito) is propagated in Los Amigos (27.50 hectares). Barangays Cawayan, Sirawan, and Sibulan have pineapples (777.62 hectares), mango (730.75 hectares), and abaca (501.15 hectares), respectively.

Map 6.1. Natural Resource-Based Production Area Exposure Map to Flood, Davao City

Landslide – At least 128 barangays, which have NRBPAs, are susceptible to landslides (Table NR – 2). The dominant crop in these areas are coconuts, which span to 77,489.04 hectares in 82 barangays. These coconut farms are source of income to 53,617 farming dependent households. Farmers in these areas are also educated on the impacts of climate change and are able to utilize sustainable production techniques. If ever the farms would be affected by landslides, a total of 4,200 farmers in these areas have access to insurance. At least 9,800 of them have alternative livelihood. Other areas have different dominant varieties. All of these areas have early warning systems in case of emergencies.

Table NR – 2. Natural Resource Production Area Exposure Attributes, Landslide , Davao City

Map 6.2. Natural Resource-Based Production Area Exposure to Landslide Map, Davao City

Storm Surge – A total of 20 barangays, which have NRBPA, are susceptible to storm surges (Table NR – 3). The dominant crop or variety of produce in these sites include pelagic fishes, mango, coconut, and banana. All of these areas span 4,671 hectares, which have 127,871 farming dependent households. Only the NRBPA in Sirawan and Binugao have 50 farming families who are able to attend climate field school and 50 farmers with access to hazard infrastructure. Sirawan, Binugao, and Lizada have also 55 farming families who use sustainable production techniques. Agricultural workers in Sirawan and Binugao, which total to 85, have an alternative livelihood whenever their produce would be affected by storm surge. The City Government also has resources to support the farming communities whenever a disaster would arise.

Map 6.3. Natural Resource-Based Production Area Exposure Map to Storm Surge, Davao City

Liquefaction – A total of 49 barangays with NRBPA are susceptible to liquefaction (Table NR – 4). Half of these have coconuts as dominant crop. All of these sites have 141,980 farming dependent households, though only 0.48% of them have attended climate field school. Only 0.54% of the farming dependent households are also able to use sustainable production techniques. At least 683 farmers have access to hazard information while 1,016 individuals have alternative livelihood.

Fault Line – Fault line systems are present in 54 barangays, which have NRBPA's (Table NR – 5). Most of the barangays with NRBPA's but have presence of fault line systems are planted with coconuts, which have a combined annual output per hectare of ₱1,674,568. All of these sites have 110,936 farming dependent households. Of the total number, only 2.32% are able to attend climate field school. Only 2.12% of the farming dependent households are able to use sustainable production techniques. At least 1.98% of them have access to insurance while 4.31% have alternative livelihood. Should there be movements in the fault line systems, the City Government have resources to respond and provide aid to the farming households. There are also early warning systems that are installed in the affected barangays.

Map 6.4. Natural Resource-Based Production Area Exposure Map to Active Fault Line and Liquefaction, Davao City

Natural Resource Production Area Exposure Estimation

The following tables contains exposed NRRP areas, exposure percentage, and exposed value. The exposed areas are those that are either moderate or high susceptible to such hazard. The exposure percentage is obtained by dividing the exposed area to the total barangay allocation by dominant crop. The exposed value is computed by multiplying the affected area to the estimated annual output per hectare. Below are the summary of the tables per hazard:

Flood – Matina Biao, which is mostly filled with coconuts, has the largest exposed area to floods with 858.79 hectares or 85.81% of the total area allocated to the dominant crop with exposed value of ₱29,282,946. Only barangays Buhangin Proper, Sasa, Lumiad, Baganihan, Buda, Dalag Lumot, Datu Salumay, Magsaysay, and Toril Proper have no areas exposed to floods.

Table NR – 6. Natural Resource Production Area Exposure Estimation, Fault Line, Davao City

Fault Line – Malabog has the largest area exposed to fault line systems with 7.42 hectares or 0.21% of the total area allocated for agricultural purposes. The site is largely planted with coconuts. Only Tapak and Sto.Niño have no areas that are exposed to fault line systems.

Degree of Impact to Natural Resource-Based Production Area

Hazards and climate changes may critically affect the flora and fauna including the agricultural production areas in NRBPA's. In this section, a degree of impact rating is given per area. The highest is three (3), where the value of property damage to natural resources is expected to be disastrous given the extent of exposure and current sensitivity of the system. The moderate score is two (2), where moderate direct impacts are expected in terms of value of property damage to natural resources. The lowest is one (1), where the direct and indirect impacts to natural resources are seen to be low to negligible and can be felt within a short-term period.

Workshop results show that only the NRBPA's within fault line systems have no degree of impact. Those areas within fault line systems have no structures, but have only farms that may be transferred to other areas.

Flood – The NRBPA's in Callawa, Waan, Calinan Proper, Cawayan, Dominga, Riverside, Wangan, Balengaeng, and Los Amigos have the highest degree of impact rating (Table NR – 11). These are expected to have the highest extent of damage to natural resources whenever there are floods. Of the barangays, Cawayan is estimated to have the highest exposed value at ₱15,005,737, where the pineapple farms would be highly affected.

Landslide – The highest degree of impact rating with a score of three (3) are given to NRBPA in Colosas, Fatima, Lumiad, Malabog, Mapula, Pandaitan, Panalun, Paqibato Proper, Paradise Embac, Salapawan, Sumimao, Tapak, Tambobong, Inayangan, Megkawayan, Tamayong, Baganihan, Dalag Lumot, Datu Salumay, Gumitan, Magsaysay, Malamba, Marilog, Salaysay, Daliaon Plantation, Eden, Tagurano, Tungkalan, and New Carmen (Table NR – 12). These areas are expected to have the highest extent of damage to natural resources whenever there are landslides. The Cavendish banana plantation in Tamayong will be the most affected, where the exposed value is estimated to amount at ₱499,524,728.

Liquefaction – The NRBPA in Mandug, Tigatto, Waan, Lasang, Binugao, Lizada, and Sirawan garnered the highest degree of impact score as these areas are expected to have the highest extent of damage to natural resources when liquefaction arises (Table NR – 13). The mango farms will be the most affected area with an estimated exposed value at ₱16,704,611.

Table NR – 13. Natural Resource-Based Production Areas, Degree of Impact Rating, Liquefaction, Davao City

Storm Surge – Storm surges are expected to greatly affect the natural resources in Bago Aplaya, Bucana, Dumoy, Matina Aplaya, Talomo, Bunawan, Ilang, Lasang, Panacan, Tibungco, Binugao, Lizada, and Sirawan. Hence, these areas gained the highest degree of impact rating with regards to storm surge (Table NR – 14). The area with the expected highest impact in terms of value is Matina Aplaya, which may possibly incur a loss of ₱721,762,044 once the fish cages with pelagic fishes would be affected.

Table NR – 14. Natural Resource-Based Production Areas, Degree of Impact Rating, Storm Surge, Davao City

Natural Resource-Based Production Areas' Adaptive Capacity

This section assesses whether there are proper adaptation and mitigation measures that are in place in the NRBAs. The lowest adaptive capacity score is three (3), which mean that addressing the impacts to natural resources would be costly. The moderate adaptive capacity score is two (2), which bare that the city government or concerned barangays can accommodate within its resources the cost for adapting and mitigating the hazard impacts to natural resources. The highest adaptive capacity score is one (1), which shows that the adaptation and mitigation measures are in place in the NRBPA.

Flood – NRBPA in nine (9) barangays have the lowest adaptive capacity score (Table NR – 15). These areas have the lowest adaptive capacity should there be flooding incidents in the areas. Among these include Malabog, Mapula, Pandaitan, Salapawan, Baganihan, Dalag Lumot, Datu Salumay, Tapak, and Gumitan. In case when their sources of income (e.g. farming, livelihood) would be affected by floods, a total of 2,120 individuals have alternative livelihood.

Table NR – 15. Natural Resource-Based Production Areas, Adaptive Capacity Score, Flood, Davao City

Landslide – A total of 25 barangays with NRBPA have the lowest adaptive score, where pursuing adaptation measures would be costly whenever there are landslide incidents (Table NR – 16). These include Colosas, Fatima, Lumiad, Malabog, Mapula, Pandaitan, Pañalum, Paquibato Proper, Paradise Embac, Salapawan, Sumimao, Tapak, Dominga, Megkawayan, Riverside, Baganihan, Bantol, Buda, Dalag Lumot, Datu Salumay, Gumitan, Magsaysay, Malamba, Marilog Proper, and Salaysay. At least 7,452 individuals would have an alternative livelihood if ever their main sources of income would be affected by landslides.

Storm Surge – A total of 12 barangays with NRBPA's have moderate adaptive capacity score. These include the natural resources in Bago Aplaya, Bucana, Matina Aplaya, Talomo, Bunawan Proper, Ilang, Lasang, Panacan, Tibungco, Binugao, Lizada, and Sirawan. This means that the city government or concerned barangays with NRBPA's can accommodate within its resources the cost for adapting and mitigating the hazard impacts to natural resources.

Table NR – 18. Natural Resource-Based Production Areas, Adaptive Capacity Score, Storm Surge, Davao City

Barangay	Exposure			Exposed Value	Impact Degree of Impact	Access to insurance	Adaptive Capacity			Adaptive Capacity Score
	Dominant Crop/Variety of Produce	Exposed Area	Exposure Percentage				Agricultural extension services of the local government	Early warning systems	Alternative Livelihood

Natural Resource-Based Production Areas' Vulnerability Categories

The succeeding tables bare the results on what are the NRBPA that are either low, moderate, or high vulnerable to such hazards. The NRBPA with high vulnerability are the areas where the hazard impacts are expected to be high, but with low adaptive capacities to cope with the expected impacts. The NRBPA with moderate vulnerability are the areas where the hazard impacts are expected to be moderate and with moderate adaptive capacities. The NRBPA with low vulnerability are those that are expected to have the least impacts as these have high adaptive capacities.

Flood – There are no NRBPA that have high vulnerability scores with regards to floods (Table NR – 19). Of the 129 barangays with NRBPA that are susceptible to floods, 11 sites have moderate vulnerabilities. These are Callawa, Colosas, Pañalum, Sumimao Tapak, Dalagdag, Dominga, Lampianao, Saloy, Bantol, and Gumitan. The rest, which consists 118 areas, have low vulnerabilities to floods.

Table NR – 19. Natural Resource-Based Production Areas, Vulnerability, Flood, Davao City

Map 6.5. Natural Resource-Based Production Vulnerability Map to Flood, Davao City

Landslide – Twenty-one (21) barangays with NRBPs are highly vulnerable to landslides (Table NR – 20). Among these are Colosas, Fatima, Lumiad, Malabog, Mapula, Pandaitan, Panalum, Paquibato Proper, Paradise Embac, Salapawan, Sumimao, Tapak, Megkawayan, Baganihan, Dalag Lumot, Datu Salumay, Gumitan, Magsaysay, Malamba, Marilog Proper, and Salaysay. At least 25 barangays with NRBPs are moderately vulnerable to landslides, which include langub, Magtuod, Matina Pangi, Callawa, Gatungan, Mabuhay, Tambobong, Dalagdag, Dominga, Inayangan, Lampianao, Saloy, Bantol, Buda, Suawan, Tamugan, Daliaon Plantation, Kilate, Sibulan, Tagluno, Tagurano, Tungkalan, Matina Biao, New Carmen, and New Valencia. The remaining or 82 barangays with NRBPs have low vulnerabilities to landslides.

Table NR – 20. Natural Resource-Based Production Areas, Vulnerability, Landslide, Davao City

Barangay	Area by Dominant Crop (Has.)	Dominant Crop/Variety of Produce	Exposed Area	Exposure Percentage	Average potential income per hectare per year (PHP)	Exposed Value	Degree of Impact	Adaptive Capacity Score	Vulnerability Index	Vulnerability Category

Storm Surge – Storm surges are expected to cause moderate impacts in NRBPA within Bago Aplaya, Bucana, Matina Aplaya, Talomo Proper, Bunawan Proper, Ilang, Lasang, Panacan, Tibungco, Binugao, Lizada, and Sirawan (Table NR – 22). Only the NRBPA in Dumoy and San Isidro have low vulnerabilities to storm surge.

Table NR – 22. Natural Resource-Based Production Areas, Vulnerability, Storm Surge, Davao City

Barangay	Area by Dominant Crop (Has.)	Dominant Crop/Variety of Produce	Exposed Area	Exposure Percentage	Average potential income per hectare per year (PHP)	Exposed Value	Degree of impact	Adaptive Capacity Score	Vulnerability Index	Vulnerability Category
